

I would like to voice an opposition to the proposed PLC action. As an amateur radio operator, I am aware that the amateur service could be rendered useless by this new service. The amateur radio operators have always been ready to lend a hand when all other means of communication have failed. However, should this proposal receive the go ahead, the amateur radio service and all future emergency communications could possibly be unavailable in times of need due to the interference caused by PLC's.

Again, count this as an opposition to PLC's.
